## AUTHORS AND ACKNOWLEDGMENTS

At the time of the writing of this paper, James A. Zack was with Environmental Systems Research Institute, Inc., Redlands, CA (current address: Dept. of Geography, University of Colorado at Boulder, Boulder, CO 80309-0260); Richard A. Minnich, Department of Earth Sciences, University of California, Riverside, CA 92521. The authors wish to express their appreciation for the contributions of Michael A. Fosberg, who took a day off from his busy schedule to discuss the finer points of the KRISSY model and its application to this study. Acknowledgments are also due to Lucy Salazar, Francis Fujioka, Michael Hamilton, and an anonymous reviewer. This study would have been much more difficult without the resources provided by Jack Dangermond of ESRI.
